## Profile

---

I am a driven and detail-oriented professional with a robust background in full-stack development and a growing passion for IT service management. I thrive on writing user stories, creating Kanban boards, ensuring productive stand-ups, and developing acceptance tests that align with user needs and business goals.

My technical expertise includes a solid foundation in JavaScript, HTML, and CSS, making me well-suited for roles that involve implementing and supporting IT service solutions. I have a keen interest in learning and applying ITSM and ITIL concepts to enhance service delivery and operational efficiency.

With extensive experience in both front-end and back-end development, I bring a unique perspective to IT service management, seamlessly bridging the gap between technical implementation and strategic vision. I excel in crafting detailed user stories, visualizing workflows with Kanban, leading daily stand-ups to foster team communication, and writing comprehensive acceptance tests to maintain high-quality standards.

My organizational skills ensure that all tasks and projects are on track, and my ability to gather requirements and work closely with business users and clients enhances project success. If you're looking for a dedicated professional who can bring order to your projects, enhance team collaboration, and deliver innovative solutions that exceed user expectations, let's connect!

## Education
